**TO WHOM IT MAY CONCERN
CENTRAL DRILLING LTD**

In November 2008 City care was awarded a tender by the Tauranga City Council to install a 225 diameter PE gravity waste water pipeline, 550m long parallel to and under the carriageway of the main road linking Papamoa and Mt Maunganui.

Due to the critical grade and accurate alignment required we engaged Central Drilling Ltd (CDL) as our key subcontractor to undertake the pipe installation by trenchless methods.

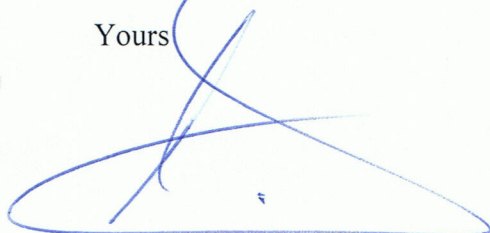

The staff of CDL have a wealth of experience of laying gravity pipelines by directional drill and coupled with their modern equipment made it an easy decision for City care to engage them for this important project.

The construction works were undertaken in full view of the travelling public and this required a high level of tidiness and planning that CDL demonstrated.

CDL completed the pipe installation efficiently with minimal disruption and no impact on the environment. They have the technical personnel, plant, machinery and other resources to successfully complete a challenging project.

We have no hesitation in recommending Central Drilling Ltd to undertake other similar works.

Yours
